

# HEALTH INFORMATION TECHNOLOGY

## INCREASE PHYSICIAN EFFICIENCY WITH EHR OPTIMIZATION

Most physicians have adopted health IT at a rapid pace, but strict regulations and suboptimal technology have left many spending too much time struggling with their electronic health records. Unrealistic and uncoordinated requirements are overburdening physicians' time and affecting quality of patient care. Overall, EHR technology continues to overwhelm with EHR investments failing to offer substantial returns due to impractical technology.

Harmony Healthcare's Health Information Technology solution solves these challenges through an EHR enhancement that combines EHR optimization at implementation, activation and post go-live, with clinical documentation, ICD-10 coding, HCC capture, and MACRA readiness. Our solution leverages the technology within the EHR to enhance its ability to support ICD-10 documentation requirements, depth of coding, and appropriate reimbursement.

Our solution will help you:

- Simplify workflow and increase compliance
- Enhance clinical documentation specificity and reduce denials
- Obtain appropriate depth of coding for optimal reimbursement
- Increase physician efficiency, satisfaction, and engagement

### EHR IMPLEMENTATION

Harmony's implementation services cover the full spectrum of technology and organization readiness – from pre-implementation planning to organizational readiness to technical build and training. We specialize in many EHR software including:

- Epic
- Cerner
- Meditech

IMPLEMENTATION

GO-LIVE

OPTIMIZATION

## EHR GO-LIVE

Harmony's activation services are designed to improve workflow, optimize revenue operations, realize project benefits, and reduce overall IT costs during an activation.

- Prior to go-live, credentialed training experts build curriculum and provide classroom training for all levels of staff, both clinical and non-clinical.
- During go-live, accredited clinicians provide at-the-elbow support on-site.

## EHR OPTIMIZATION

Harmony's optimization services are physician interactive and designed to standardize physician coding and documentation.

- Customized documentation templates for EHR enhancements that are physician focused and facilitate capture of clinical documentation specificity, accurate coding, medical necessity, and charge capture.
- Cost-effective solution for physician education, EHR workflow best practices, and improved clinical documentation and coding outcomes.

Harmony Healthcare's Health Information Technology solution provides the strategic tools, planning methodologies, and effective accelerators required to take your EHR investment to the next level. As an increasing number of health systems struggle to maintain profitability, the benefits of leveraging staffing and consulting solutions to optimize your EHR can contribute to greater efficiencies and cost savings, leading to a thriving, more stable bottom line.

Our solution solves your challenges through an EHR enhancement that combines EHR optimization at implementation, activation and post go-live, with clinical documentation, ICD-10 coding, HCC capture, and MACRA readiness.

Harmony Healthcare, a human capital management company, provides staffing and consulting solutions in Population Health and Revenue Cycle Management to a diverse range of healthcare organizations nationwide. The company's portfolio delivers quality solutions to empower healthcare organization success, enhance clinical and financial outcomes, and enable the transition to value-based healthcare.
