

# Denials Intelligence

AI-Powered Insights. Human-Driven Decisions.

Denials cost hospitals millions in lost revenue and consume valuable staff time. Harmony Denials Intelligence, powered by Palantir and built by us, changes that.

**Faster Resolution. Lower Cost. Better Outcomes**

**1 in 5**  
claims denied

Across U.S. healthcare systems

**\$48B+**  
lost annually

Revenue leakage from denied claims

**Denials**  
increasing YoY

Rising complexity + payer scrutiny

## The Denials Challenge

Why hospitals struggle:

- ⊗ Manual and research-heavy workflows
- ⊗ Multiple payer portals & fragmented systems
- ⊗ Inconsistent reviewer interpretation
- ⊗ Long resolution cycles and high rework

## The Harmony Approach

AI Pre-Analyzes. Experts Decide.

Harmony transforms denial workflows into a centralized, intelligent system:

AI interprets denial data & payer language

All workflows  
All iterations

Policies, fee schedules, and edits in one place

Reviewers validate, not search

### 1. AI Pre-Analysis

Denials and payer rules analyzed automatically

### 2. Unified Intelligence Layer

One place for LCD/NCDs, payer policies, NCCI edits, and fee schedules

### 3. Human Validation

Experts confirm accuracy and finalize decisions

## Proven Impact with Harmony

Faster denial resolution

Improved coding accuracy

Greater consistency across teams

Higher productivity without headcount

Lower cost per denial

## Better Together: AI + Expert Registrars.

Because your team should be making decisions, not searching for answers.
